MARKET ENVIRONMENT DOSSIER (MED)

Lori McGwire
TCG Senior Analyst

The Market Environment Dossier (MED) is a table that I use to more objectively formulate my thesis for the day. It helps me assign conviction level to the various correlations and trends that can impact the market.

The checklist ensures that I evaluate all of the key components that could influence the indices. The weights of the various factors can change from time to time as correlations become stronger or weaker.

TABLE COMPONENTS

- Weekly Trend (ES)
- Daily Trend
- 4hr Trend
- 1hr Trend

How I use the table

If a name is in an equilibrium and direction cumulative total the more conviction for the thesis. It's not an absolute predictor of market direction, but it helps guide my trade setups and form my if/then statements for the trading day. Based on the MED results you can play the indices or the more volatile stocks in that direction.

If the bullish lean is greater than 100, I will then scout backburner trades to go long. If the bearish lean is greater than 100, I will then scout reverse backburner trades to go short.

Health & Safety Warning

It goes without saying that even though the MED table can provide valuable insights, anything can happen in the markets.

Watch out for impactful news and announcements, and always use a stop-loss!
